Social Psychology Final Project

Benjamin Lira

Moral Foundations Theory (MFT) makes the claim that differences in moral foundations explain political affiliation, such that people with higher moral taste for purity, loyalty, and authority are more likely to be conservative. This idea has not been causally tested. In this investigation we leverage social media data to test the hypothesis that users who have become more politically polarized through time shift their moral foundations, or whether changes in moral foundations explains changes in political orientation. To test this, we leverage text analysis methods to measure user's political orientation through time, and their use of moral foundations language. Second Abstract adfnsdf

Abstract

Introduction

Here are some cites (Abrahams et al., 2019)

Method

This is some testing.[1]

Here's a table

List One

- Item A
- Item B
- Item C

List Two

- Item X
- Item Y
- Item Z
